Languages: C, C++, C#, Python, JavaScript, TypeScript, HTML, CSS, Bash, SQL (MySQL, PostgreSQL)

Tools: Linux, Windows, Visual Studio, Git, Bitbucket, Jira, PowerShell, Azure, AWS, Docker, pgAdmin, WordPress

Frameworks: Node.js, React, Angular, Express, Electron, Django, Jest, REST, jQuery, .NET, WinForms, ROS 2

Technical: SDLC, CI/CD, TDD, SaaS, OOP, Data Structures, Algorithms, Debugging, RDBMS, Unit Testing

Soft: Agile Methodology, Scrum, Research and Development, Teamwork, Cross-Functional Collaboration

Experience

Software Engineer, Full-Time

Mar 2024 – Present

Simplexam

- Optimized backend performance, reducing CPU utilization by 45% through parameterized queries, lazy loading, and Angular's ActivatedRoute to minimize redundant API calls.
- Engineered a system to detect dual logins by analyzing JWTs and IP addresses, enforcing single active session per user to prevent account misuse and improve security.
- Integrated OpenAI API with OCR to extract structured data from claimant intake forms, auto-prefilling Angular forms to streamline intake workflows and reduce manual entry.
- Developed an attorney-facing referral portal end-to-end, including Angular frontend, Node.js backend, PostgreSQL database architecture, UI styling, and deployment to enable direct claim referrals.

Software Engineer, Contract

Feb 2023 – Aug 2023

Lablaco

- Enabled RFID technology integration with IoT devices and NFC tags. Implemented a system to generate NDEF links for NTAGs and a progress bar using JavaScript, HTML, React, and a custom Node.js PCSC library.
- Constructed 16 CRM app pages to filter and display transactions, creators, and users for the JavaScript application with a Python, Django, RESTful API, and MySQL backend.

Software Engineer, Intern

Nov 2022 – Mar 2023

MindHome

- Wrote Python scripts to teach a robot prototype to perform basic household dusting using calculated angles and intervals, improving the algorithm by 13% using Gazebo 3D simulator and Blender.
- Tested ROS 2 (Robot Operating System) versions ROS 2 Humble and ROS 2 Foxy on Ubuntu 22.04 and 20.04, playing a key role in identifying essential project requirements.

Systems Administrator, Contract

Mar 2022 – Oct 2022

Apex Scientific

- Reviewed over 2,000 email security alerts in Graphus to identify false positives, phishing attempts, and malware by analyzing headers, cryptographic signatures, hyperlinks, and email content.
- Maintained Windows desktop administration, performed Azure and Office 365 API integrations using IT Glue, and provided hands-on technical support to help desk users.

Education

Bachelor of Arts (B.A.) in Cognitive Science

Sep 2021

University of California, Davis

Certifications

Certified Ethical Hacker (CEH)

Dec 2023

TestOut
